

Green Pin Shackle - Redesign

In June 2010 Van Beest redesigned their manufacturing process for the range of Green Pin Screw Pin Shackles. The reasons behind this are explained as follows. The previous design, after assembly some of the threading is visible at the shackle eye.

New design, with hardly any or no thread visible at the shackle eye.

We realize this by making a small “chamber” in the shackle eye.

The advantage of the new design is reduced wear of counter components like, wire rope, chain, rope and or synthetic web slings and their fittings.
